Re: Product Manager, Retail & Insights, dunnhumby

Dear Hiring Team,

I am writing to apply for the Product Manager, Retail & Insights role. I am a product manager with 5+ years at PlanetSpark, a two-sided B2C marketplace serving 138,000+ enrolled learners, where most of my time goes to exactly what this role is built around: defining API-first, reusable platform capabilities and owning third-party integrations end to end.

Integration lifecycle ownership is the core of my day job. I act as the primary point of contact for our external technology partners - payment gateways (Razorpay, PayU, PayGlocal, PayPal, Bajaj) integrated via their APIs for payment creation, status verification and webhooks; telephony (Exotel, Servetel, Tata Tele); live-class video (Daily.co, 100ms); video counselling and recording (Convin); and messaging (Gupshup, Venera Connect). For each, I run discovery, write the API contracts, data mappings and integration specifications, work with engineering through implementation, and own it through monitoring and maintenance.

I also try to build capabilities rather than point solutions. Our payments integration became a shared capability reused across the app, LMS and CRM, and an omnichannel support service consolidated LMS, email, WhatsApp and chatbot channels into one system. On the content side, I built and deployed a grade- and course-wise content catalogue with our content team, then automated content generation with AI prompts, removing the manual content step entirely.

On measurement, I own lead-source attribution in a centralised CRM, where inbound leads are auto-tagged with UTM parameters and tracking cookies, and I partner with marketing and sales to optimise lead flow, lead acceptance and the best-performing sources. I segment audiences by learner grade, and by industry and seniority for working professionals, and I track adoption, reliability and data quality through SQL and Power BI dashboards.

I will be straightforward about one thing: I have not worked in Retail Media or AdTech, so I do not yet have hands-on depth in auction dynamics, bidding and pacing, or the ad server, DSP and SSP stack. What I do bring is the integration, platform and measurement craft this role runs on, a record of getting productive quickly in unfamiliar systems, and genuine interest in the space - I would rather say that up front than have you find it in week one.

dunnhumby's premise, putting the customer at the heart of the decision with real data behind it, is how I already try to build. I would welcome the chance to talk about where you are taking the platform's integration ecosystem next.

Thank you for your time and consideration.

Sincerely,

Kshitiz Yadav
