Re: Product Manager, Payoneer

Dear Payoneer Hiring Team,

Payoneer's mission -- removing friction from cross-border business so underserved companies can compete globally -- is a larger-scale version of the product problem I've spent the last five years solving. As a Product Manager at PlanetSpark, I re-architected our customer journey end-to-end to cut friction at every step: single-step OTP sign-in, a preference-capture ranking model, and hands-on API integration of five payment gateways (Razorpay, PayU, PayGlocal, PayPal, Bajaj) handling transaction creation and status verification.

I own customer-facing initiatives from strategy through execution, not just delivery. I built and A/B-tested a product feature that drove 20% revenue growth and 25% ARPU expansion, and designed an in-product renewal engine that generated ₹70L in renewals in a single month. I lead cross-functional teams across engineering, design, and business stakeholders, and I make decisions the way your team does: instrumented and data-backed -- I've built SQL-sourced Power BI dashboards for Marketing, Sales, and Operations, and shipped a production AI feature that analyzes customer behavior to sharpen our sales team's conversations in real time.

"Do it. Own it." resonates with how I work: proactively identifying where a product could do more for the business, then owning the outcome end-to-end rather than just the delivery. I'd welcome the chance to bring that ownership to Payoneer's Business Applications team, and to learn how a genuinely global, cross-border product operates at scale.

Thank you for your consideration.

Sincerely,
Kshitiz Yadav
